Diagnosis ›

Following an in-depth initial consultation at your premises, we will present you with a situation report to show how we might optimize your catering facilities. We form a utilization plan in consultation with you, and then we work together to work out what steps to take to improve your facility.

Coaching ›

We coach your staff (management, kitchen team, technical director) with individual consultations on the following specific topics:

Education and training ›

We offer seminars in theory and practice on all aspects of catering areas:

- › *Menu design according to the latest quality standards (e.g. for nutrition, organic, allergies and many more)*
- › *Cost calculation for materials and staff*
- › *Workflows*
- › *Team development*

Project development ›

Whether it is a new construction or restructuring – we can apply our years of experience to support you in the development of your ideas and assist you in all aspects right up to implementation – including discussions with architects, planners and authorities.

Expert opinions and evaluation ›

We provide expert opinions to optimize use on the basis of best practice examples. We describe your potentials for synergy and help you to put the benefits of change processes in writing. These utilization plans can be used as a template for your communication with architects and construction experts.

Paths to certification ›

We support you in quality assurance processes through the development of guiding principles. The team has practical preparation through workshops. We are happy to advise you on the certification processes of all the popular providers and guide you on your way to becoming certified.
